

Assignment # 1

IT for Business – Excel Skills

You are enrolled in an IT for Business course. This assignment is designed to assess your ability to independently source business data, clean it, analyze it using Excel functions, and present insights through an interactive dashboard suitable for management decision-making.

Data Requirement

Students must independently find a real-world business data set (sales, operations, customers, finance, or supply chain).

Part A: Data Cleaning

- 1 Use TRIM to clean text fields.
- 2 Use SUBSTITUTE to remove unwanted symbols or characters.
- 3 Apply correct formatting to dates, currency, and numeric fields.

Part B: Lookup Functions

- 1 Create a reference table (product, category, region, or similar).
- 2 Use XLOOKUP / VLOOKUP.

Part C: Calculations

- 1 Use SUM to calculate totals.
- 2 Use SUMIFS for conditional totals.
- 3 Use COUNTIFS for conditional counts.

Part D: Conditional Formatting (10 Marks)

- 1 Highlight high and low values using conditional formatting.
- 2 Apply color-based rules to show performance levels.

Part E: Pivot Tables & Slicers (20 Marks)

- 1 Create at least three pivot tables.
- 2 Use slicers to filter pivot tables dynamically.
- 3 Ensure proper labeling and formatting.

Part F: Dashboard (10 Marks)

- 1 Create a one-page dashboard.
- 2 Include KPIs, charts, and slicers.
- 3 Ensure all visuals are interactive.

Part G: Business Insights (10 Marks)

- 1 Summarize key insights from the data.
- 2 Provide at least two business recommendations.

Submission Guidelines

Submit a single Excel file (.xlsx). You are free to use any other formulation if you want.
