

Assignment: Excel Power Query & Power Pivot

This assignment is designed to evaluate your understanding of Excel Power Query and Power Pivot. You are required to replicate the work demonstrated in class and extend it by integrating additional data tables and creating a meaningful dashboard.

Dataset Provided:

- Calendar-Lookup.csv
- Customer-Lookup.csv
- FoodMart>Returns-1997-1998.csv
- Product-Lookup.csv
- Region-Lookup.csv
- Store-Lookup.csv
- FoodMart-Transactions-1997.csv
- FoodMart-Transactions-1998.csv

Tasks:

1. Part 1: Replication of Class Work (8 Marks)

- Load all provided datasets into Power Query.
- Perform necessary transformations (e.g., data cleaning, renaming columns, changing data types).
- Load the cleaned data into the Data Model.
- Create relationships among all tables using Power Pivot.
- Ensure your data model is correctly structured (fact and dimension tables).

2. Part 2: Data Expansion (6 Marks)

- Add at least three (3) additional tables of your choice.
- These tables should be relevant to the dataset.
- Import and transform them using Power Query.
- Create appropriate relationships with existing tables.
- Justify your added tables (short explanation in submission).

3. Part 3: Power Pivot Analysis & Dashboard (6 Marks)

- Build Power Pivot using the Data Model.
- Design a dashboard to present key insights.
- Use slicers, charts, and formatting for better visualization.
- Focus on clarity, usability, and storytelling.

Marking Criteria (Total: 20 Marks):

- Replication Accuracy: 8 Marks
- Additional Tables & Relationships: 6 Marks
- Dashboard & Presentation: 6 Marks

Submission Guidelines:

- Submit your Excel file with all queries, data model, and dashboard.
- Include a short explanation (1 page) of the additional tables you created and their purpose.
- Deadline: 13th Apri, 2026
